Product Description

COACH pipes are high performance casing pipes and column pipes for bore well application. It should be carefully designed to withstand high internal hydro static pressure exerted by pump and the tensile strength to carry the total weight of pumpset and water column as well. The COACH pipes are carefully formulated and designed considering all safety factors which results in its effective performance and durability. These pipes are produced in different sizes and types, should be selected carefully according to the installation requirements.

Special Features

- | Smooth surface reduces the hydraulic friction losses and increases flow of water
- | Internal and external square thread spigot ends and rubber gasket results in easy, reliable joining and good pressure sealing.
- | Special square thread is provided for quick & easy installation and high load bearing capacity.
- | Inside sealing ring provides turbulence free leak proof joint and prevents over tightening.
- | Step ring prevents leakages and controls the vibration and over tightening.
- | Smooth internal surface increases 10% to 30% water and reduces 10% to 20% power consumption.
- | Provision of outer ring prevents leakage and over tightening.
- | Extra-long coupler in Heavy++ & Super Heavy series for higher load pulling strength and maintenance free joining system over period of time.

Features

- | Corrosion Free
- | Inert to chemicals
- | Very low friction losses
- | Cost effective
- | Energy saver
- | Long life
- | Non toxic
- | No electrolytic deposition
- | Easy installation & handling
